

INSECTICIDE

Effective Insect Control

Our easy to use aqueous insecticide provides long lasting control of all types of flying and crawling insects.

For the eradication of infestations in carpets and hard surfaces, simply spray on and leave to dry naturally.

Safe to use in inhabited spaces by pets, though toxic to fish so aquariums should be covered.

Contains cypermethrin for long lasting effect of both living insects and eggs, which hatch up to 15 days after treatment and are unaffected by conventional treatments.

Does not stain or leave an odour, so ideal for use in hotel rooms and public areas and on carpets and soft furnishings.

HSE no. 9067 approved Insecticide for control and extermination.

- Easy to use, ready to use formula
- Approved insecticide for control and extermination of crawling and flying insects
- HSE No. 9067
- Effective for at least 14 days

PACKAGING

Order Code : INSEC1

Pack Size: 12 x 1L

Order Code : INSEC5

Pack Size: 2 x 5L

APPLICATION

Shake well before use.

Apply 1—4 ml of insecticide per cubic metre as a fine mist. Use for maintenance treatment on a monthly basis, treating all surfaces as above.

The insecticide must remain on the treated surfaces for 14 days before wet cleaning to ensure that the unhatched eggs and larvae come into contact with the insecticide and do not create another infestation.

STORAGE

Store in the original sealed container in cool, dry conditions.

Keep lid tightly closed when not in use

Keep out of the reach of children.

INSECTICIDE

Effective Insect Control

ANTS: Hard outer coating (exoskeleton or cuticle). It functions as armour, an attachment base for internal muscles and prevents water loss. 3 main parts: head, thorax and abdomen.

BED BUG: A reddish brown colour, purple after feeding, exposed human skin is prime target. Up to 1/4 in in length and oval shaped.

CARPET BEETLE: <1/4 inch long. Larvae are about the size of an adult beetle. Have dense tufts of bristles on their bodies.

CASE BEARING MOTH: Up to 1cm long, mottled buff to dark brown in colour with reddish brown headed white larvae or caterpillars.

CAT FLEA: Treat pets with the necessary registered treatment. Measure about 1/6inch in length and laterally flattened.

CLUSTER FLY: Slightly larger than common house fly. Abdomen has irregular light and dark grey areas.

CONFUSED FLOUR BEETLE: Severe pests in mills and bakeries, also found in grain & nuts tainting food & causing mould growth

DOG FLEA: Treat pets with the necessary registered treatment. Measure about 1/6inch in length and laterally flattened.

FRUIT FLIES: About 3mm long & accumulate around spoiled fruit.

GERMAN COCKROACH: Adults normally reach 10-15mm long and yellow/brown with two dark marks on the pronotum.

GRAIN WEEVILS: serious pest in grain and other hard cereal products tainting your products and encouraging mould growth

HOUSEFLY: Laying between 500-900 eggs during an adult life and are associated with several diseases i.e. typhoid & dysentery

INDIAN MEAL MOTH: larvae cause the most problems: chewing through packaging and binding food stuffs together

MILL MOTH: main pest within flour mills but can also be found in bakeries and animal feed plants

ORIENTAL COCKROACH: same control methods can be used as German Cockroach

SILVERFISH: wingless, flay insects with long antennae on the front and bristles at the rear of a tapered body. 1/2 inch long.

TICKS: body is composed of two sections. Usually found in heavily grassed areas

TROPICAL WAREHOUSE MOTH: found in imported cargo, infestations also reported in cereal manufacturing plants.
