

SUPERSOLA POLISH

Wet Look Floor Polish

Supersola is a blend of durable polymers that exhibit long lasting wear combined with scuff and friction resistance. The thermoplastic raw materials used in the manufacture of *Supersola* will ensure the floor finish won't powder even under severe conditions. It will withstand high speed burnishing without fracturing. When maintained with *Supercare* the floor will have a wet gloss look. *Superstrip* or *Strip-Free* will enable the user to remove old finishes from the floor surface.

- Easily applied, easily maintained flexible wet look gloss
- Can be spray cleaned with *Supercare*
- Will not fracture or powder under severe conditions
- Able to withstand heavy foot traffic
- Thermoplastic properties respond superbly to ultra speed burnishing and high speed buffing machines

APPLICATION

Depending on traffic conditions and problem areas, *Supersola* can be easily maintained using a dilute solution of *Supercare* or *Solacare*.

The floor can be damp mopped these, then buffed with a high-speed machine or burnished with an ultra-speed machine to give outstanding results. The thermoplastic properties will respond to heat generated by the machine, softening and bonding to the surface to give good wearing properties.

On areas of heavy traffic, a thin neat coat of *Supercare* can be applied to further enhance wear characteristics and revive gloss. Always give extra attention to doorways, lift entrances, traffic lanes etc.

Coverage rates – up to 250sq m per 5L depending on the floor type and condition.

PACKAGING

Order Code : Y-BS17

Pack Size: 2 x 5L

STORAGE

Store in original, sealed container.

Keep lid tightly closed when not in use

Keep out of the reach of children.
